- Why Data Entities
- A City of Columbus Use Case

# Data Entity MS Explanation

Data entities provide conceptual abstraction and encapsulation of underlying table schema that represent data concepts and functionalities.

In Microsoft Dynamics AX 2012, most tables, like the Customer and Vendor tables, were de-normalized and split into multiple tables. This was beneficial from a database design point of view, but made it difficult for implementers and ISV's to use without a thorough understanding of the physical schema.

Data entities were introduced as part of data management to be used as a layer of abstraction to easily understand by using business concepts. In previous versions there were multiple ways to manage data, such as Microsoft Excel Add-ins, AIF, and DIXF. The concept of data entities combines those different concepts into one. After data entities are created, you should be able to reuse them for an Excel Add-ins, import/export, or integration.

# Say What?

- Using basic and familiar business concepts, data from multiple tables is grouped together in a way that is easy to understand.
  - Example: Vendor Record

[Dynamics365musings.com/d365-data-entity](https://Dynamics365musings.com/d365-data-entity)

# Why Data Entities

- Easily understood (familiar business concepts)
  - A Customer/Vendor Record
  - Items, including storage and financial dimensions
- Controls access to certain tables
  - Especially for 3<sup>rd</sup> party applications
- Add and/or Extract Data

# City of Columbus Use Case

- Fixed Assets
  - Monthly: 40-60 assets
  - Year End: (Project related Assets) 900+ assets
  - Manual Addition: 2-3 min/asset
  - Resource: 1 Person

# Test Plan

- Identify the Fixed Asset Data Entity(s)
- Export Existing
- Determine the Required and Desired Fields
  - Populated upon export
  - Entered during manual process
- Create a Template
- Import to Sandbox
- Review Results

# A Note About Security .....

Very few roles have access to Data Management ....

Which is as it should be!
