

Inventory Optimization built for powerful simplicity

Netstock gives challenger organizations the modern toolkit to drive smart inventory optimization and planning. Powerful analytics that don't demand a data scientist. Simple dashboards for confident decision-making. Intelligent insights to drive strategic growth.

The inventory toolkit you need to fuel growth

Watch Demo

Inventory Optimization

An intelligent inventory command center shows all your critical inventory KPIs in a single dashboard view: inventory holding, excess stock, surplus orders, fill rates, potential stock outs and more. Netstock prioritizes your top 5 items to address for immediate impact. Plus, Netstock automatically categorizes every item by sales velocity and profitability, providing prescriptive and prioritized recommendations on the

items and issues most profitable to your business.

Recision Forecasting & Demand Planning

Generate accurate forecasts with one click.

Free your time to think and plan for resilience and growth. Easily run "what-if" scenarios and create strategic plans for best- and worst-case scenarios to maintain inventory and fill rates in the face of dynamic demand and supply lead time.

Quick & Confident Ordering

Move from painful and time-consuming manual ordering workflows to the intelligent automation of Netstock's one-click ordering. Automatically generate balanced and optimized orders for each SKU — based on predictive plans that anticipate both dynamic demand and supply risk. Netstock seamlessly connects with your ERP system for streamlined ordering.

Sales & Operations Planning

Create centralized visibility and accountability and enable modern sales & operations planning (S&OP). Synchronize decision-making across the entire business to execute strategies that perfectly align operations and supply chain plans with sales, marketing and financial strategies.

Bridging the gap between ERP and inventory planning ERP systems are the beating heart of operations in many organizations — but they're not

inventory optimization tools. Raw ERP data requires manual manipulation — and tedious spreadsheet management. Netstock bridges this gap, automatically integrating and analyzing real-time ERP data into actionable insights to drive smart inventory decisions.
