# What is Fusion Development?

[#ProCodeNoCodeUnite](#)

# Work Distribution Per Sprint

# Challenges

## Customer's Challenges

- Rules are **scattered** across the platform (Power Automate Flows, Plugins, and Custom Actions).
- Rules are **hard coded** and require coding changes and release.
- Finding the rules to change requires investigation and **understanding of the code base**.
- High-complexity rules in Power Automate are difficult to manage.
- Limited capability for a power user to **maintain** the rules.
- **Numerous rules tend to get complex**.
- Rules are **difficult to test**.

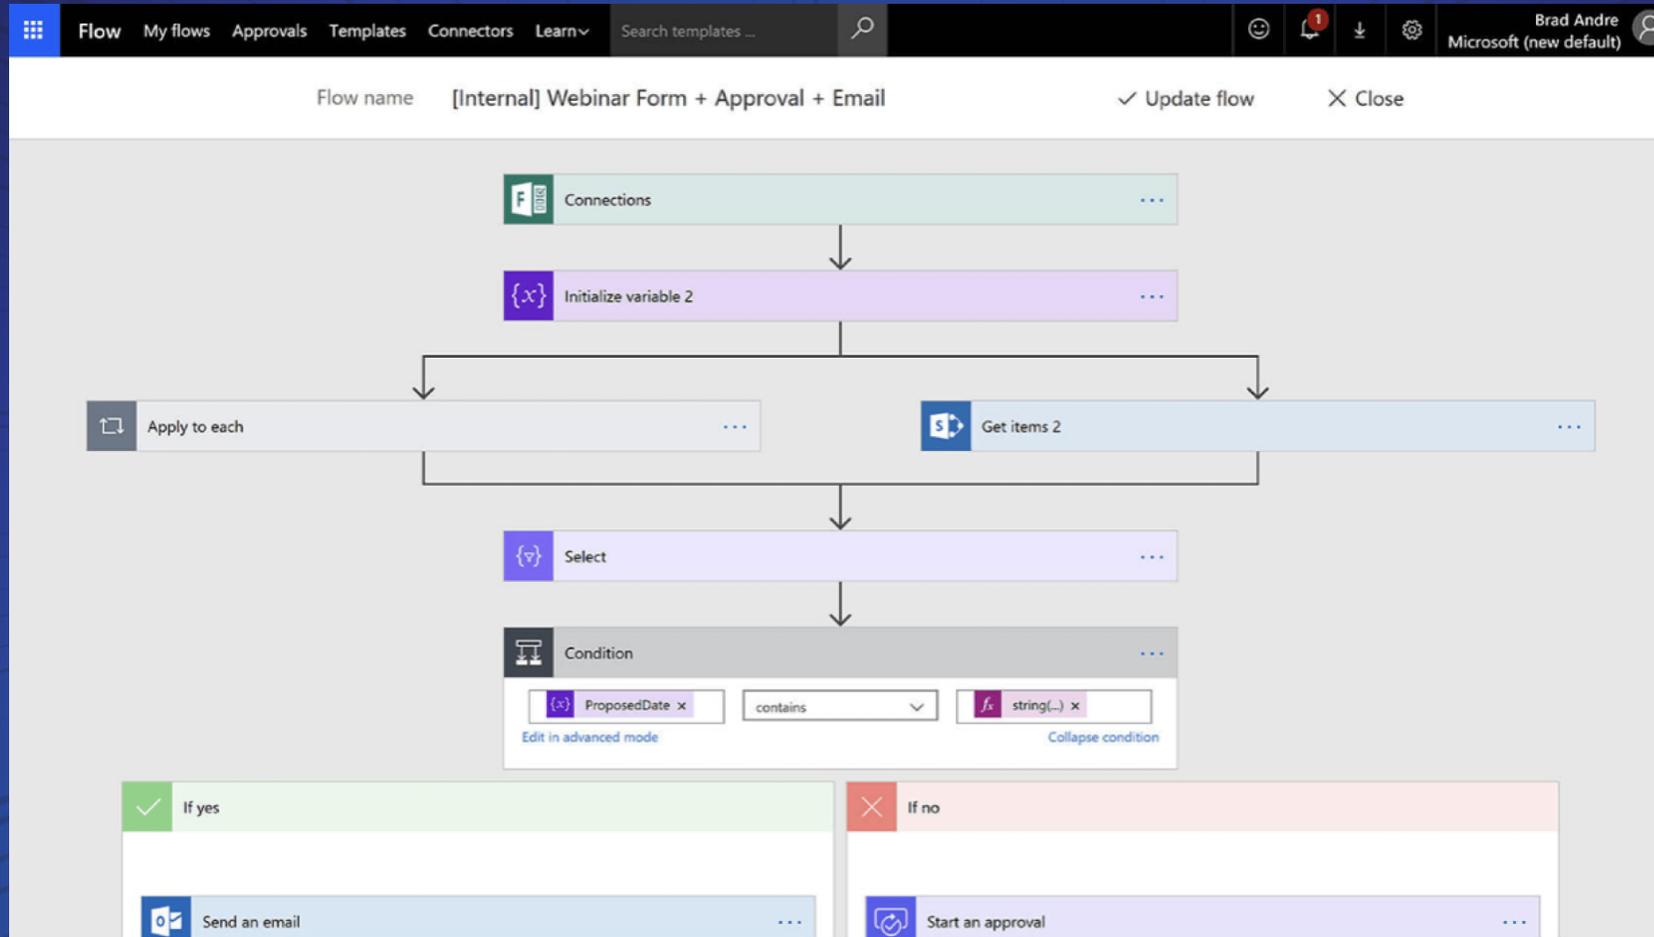

## High Level Requirements

- A centralized location to manage the rules.
- Rules are easy to maintain by a power user – even with 100s of rules and 100s of criteria.
- Rules can easily be deployments across SDLC environments.

## High Level Non-functional Requirements

- Preference to leverage a SaaS rules' engine.
- SaaS solution needs to be located near-shore.
- Engine should not contain sensitive information at rest (stateless is preferred).
- Engine needs to be performant (to quantify).
- SaaS solution needs to meet a level of availability i.e. DR (to quantify).
- Rules are stored securely.

# Options

mscrm-addons.com  
Your company for MS-CRM ADD-ONS!

# Competition

✓ Low Code

✗ Difficult to maintain

✗ Not a rules engine

✓ Mature

✗ Costly

✗ Generates Code

✓ OOTB D365 Connector

✗ "Connects" to Dataverse

✗ Slow

✓ Leader in Financial

✗ Hosted Outside

✗ Complex Pattern

# How to Build a Framework?

1. Evaluate feasibility – What are we gaining? Saving?
2. Acknowledge limitations and roadmap (nice to have)
3. Ensure the customer is on board
4. Ensure the team is on board (FUSION)
5. Support it with testing – including stress test
6. Come up with guiding principles

# Evaluation Engine Principles (easy to implement)

- Leverage out-of-the-box platform strength and capabilities
- Leverage out-of-the-box schema configuration and security
- The engine is not responsible to calculate/rollup values
- The engine is not responsible for any integrations
- The engine executes within the platform, does not require any external infrastructure

# Evaluation Engine Principles (Reusable Generic)

- The engine is an API extension to the base platform (can be called from outside the platform using API extensions)
- No dependencies on any of the existing components
- The engine is loosely coupled with rules and existing schema
- The engine is unaware about the rules and the existing schema during the design/built time

# Evaluation Engine Principles (SOLID)

## SOLID

- S – Single Responsibility
- O – Closed for Modification, Open for Extension
- L - Liskov substitution principle - design by contract
- I - Interface segregation principle: "Clients should not be forced to depend upon interfaces that they do not use."
- D - Depend upon abstractions, [not] concretion

# Features

## Authoring

- Define Rules
- Version
- Effective Dates

## Release

- Data Driven / Secured at Rest by Dataverse
- Deployment Data Secured in ADO
- Easy to Transport using DevOps

# Capabilities

## Payload Generation

- Key/Value Pairs
- 1:N Lists

## Execution

- Feed the rules and the payload to the engine
- Identify the result

## Execution Result

- Update records
- Execute Action
- Call a Power Automate
- Create records (e.g. tasks)

# Implementation Vision

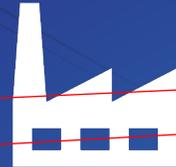

# Execution Sequence

Sample Task - Saved

TASK Related

Totals	338	2573	507

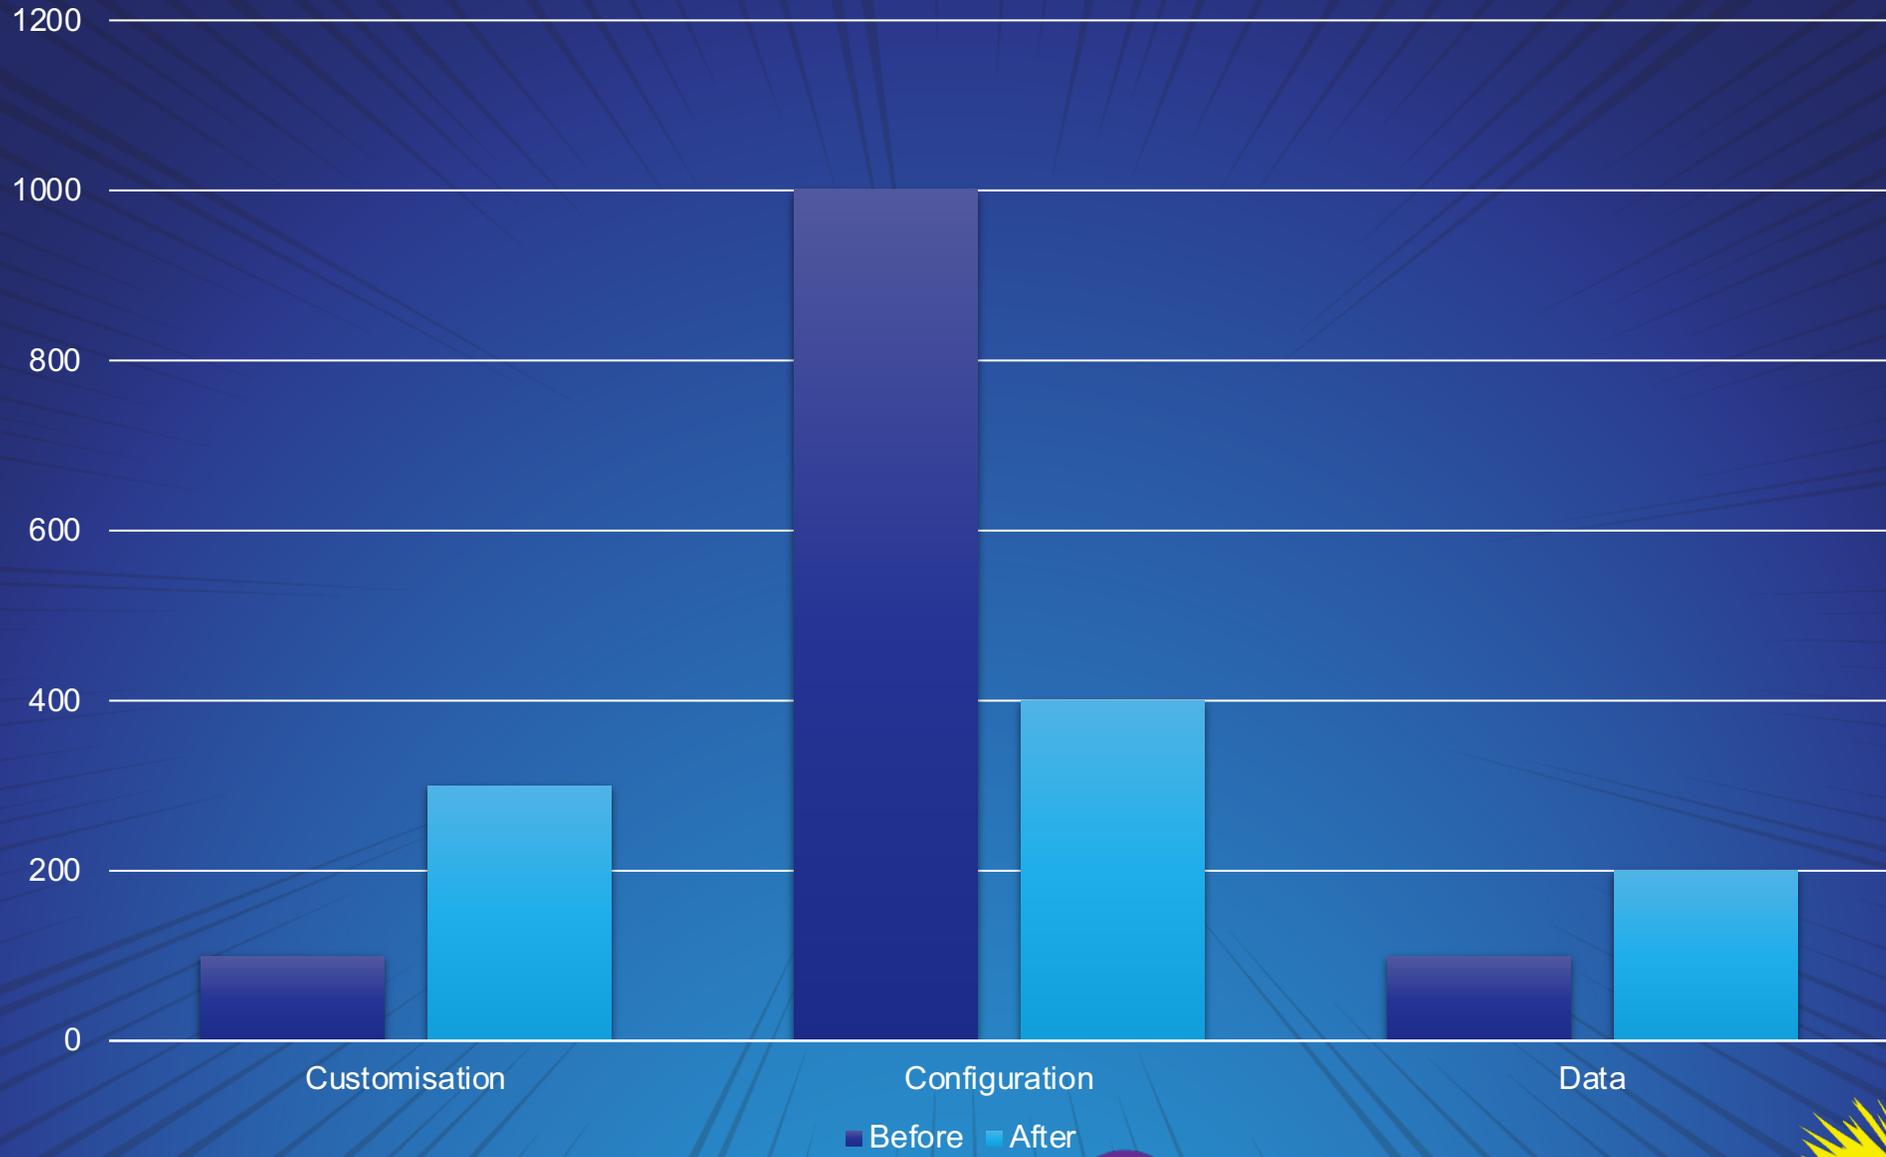

# Evaluation Engine Customisation Sequence Diagram

# Final Results

# Work Distribution Per Sprint

# Where We Are Today

Complexity implementation completed / reduced

Data driven by functional analysis – no need for further customisation

Faster time to delivery

Easy to build, easy to maintain

Increased test coverage – better regression

Better work distribution

Lower defect rate

Team significantly more engaged

# Final Words

Leverage Fusion Development

Utilise the platform's capabilities to their fullest

Get the most out of your team's diversity

Nurture people's passion

Challenge your team to look at better alternatives

Question the status quo

Explore other options that work better for your circumstances
