About us

eazystock

EasyStock is a cloud-based inventory optimization tool that helps businesses forecast demand with confidence, stock the right items, and optimize their purchasing.

EasyStock eliminates the need for complex, time-consuming spreadsheets. The software calculates demand forecasts, order quantities, reorder points and safety stock levels using advanced statistical algorithms.

Our Business Central and NAV connectors make it easier than ever to get started; on average, users report only 3 months to ROI.

Connect, forecast, optimize, order with EasyStock – and save time and money.

syncron

EasyStock is developed by Synchron, a world leader in providing inventory optimization software to enterprise-sized businesses for over 20 years.

EasyStock customers benefit from the same high-performance platform but with the user experience and features tailored toward smaller operations.

EasyStock has really saved me time, and anyone using spreadsheets will definitely find it saves them so much time. With our old system, doing the purchasing on my own would have been quite stressful. Managing the ordering by myself is much easier since we've been using EasyStock.
