

End-to-end Purchase Order Visibility

Enhance purchase order visibility within your ERP by automating supplier follow-ups.

Automate Supplier Follow-ups

- Enable your buyers to be more strategic by automating the manual emails to collect acknowledgments, open order reports and shipment tracking information
- Manage by exception by receiving real-time notifications when changes occur
- Scale and digitize your operations without needing to increase headcount with a platform that runs on auto-pilot

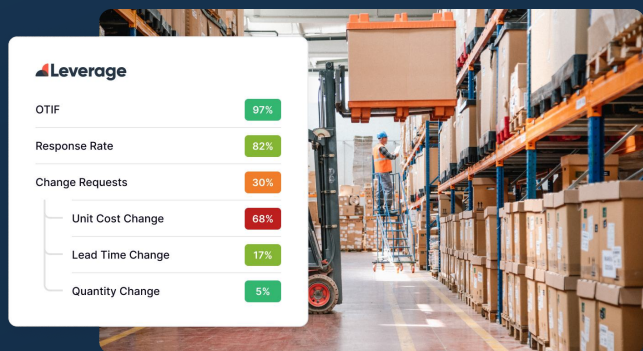

Supercharge PO Visibility in your ERP

- Get real-time data right in your systems, with pre-built Leverage integrations into over 35 ERPs
- Allow any team to access the data they need right in the systems they already use
- Generate supplier performance reports like OTIF, lead-time drift, and supplier engagement metrics with trusted structured data

Increase Supplier Adoption

- Meet your suppliers where they are - allow them to operate right from their emails with our smart digital POs embedded in their inboxes
- Use our AI to OCR parse PDFs and spreadsheets that are generated from suppliers' ERPs so you can get automatic adoption - without suppliers even knowing that Leverage exists
- No need to require your suppliers to learn a new technology, adopt new systems, or log-in to a vendor portal - if they know how to use email, they know how to use Leverage

Realize Significant ROI across the company

- **Procurement**: Automate manual tasks done by buyers today, shifting headcount to more strategic work, or reducing future headcount
- **Production**: Reduce production disruptions by mitigating issues as they happen
- **Customers**: Increase customer satisfaction by reducing delays and providing accurate updates
- **Accounts Payable**: Reduce the time it takes to reconcile and 3-way match, by ensuring PO data is accurate in your ERP
- **Finance**: Reduce air freight and other costly escalations by getting ahead of delayed shipments
- **Planning**: Supercharge planning teams and your MRP by ensuring the latest lead times in your ERP are up to date

Fully integrated with your ERP
